PRACTICAL 6

Aim : Design and implement scrolling technique

1.Implement and Design a food delivery application & implement vertical and horizontal scrolling both .

Create a new design>> Select Frame>> Android Compact

Click on frame again and in that add rectangle and let it go out of frame (overflow) but the frame size should not go outside the main android compact frame.

Same again create a new frame and add any shape and overflow it.

After adding in both frames individually in each frame select all the shapes through shift and then shift+A.

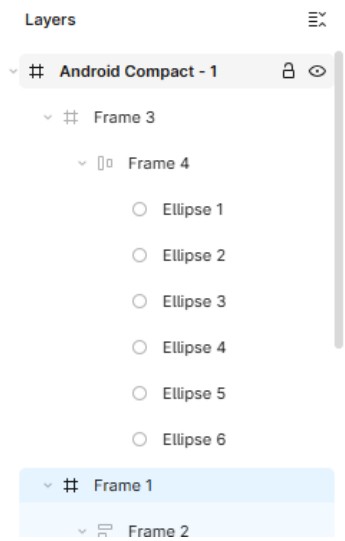
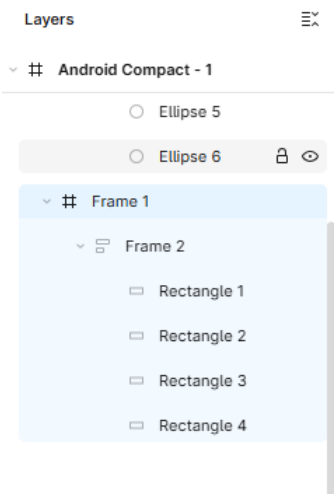
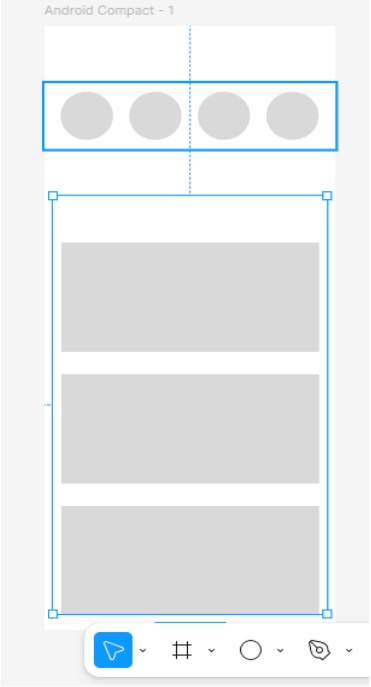
Below is the hierarchy and the frame size





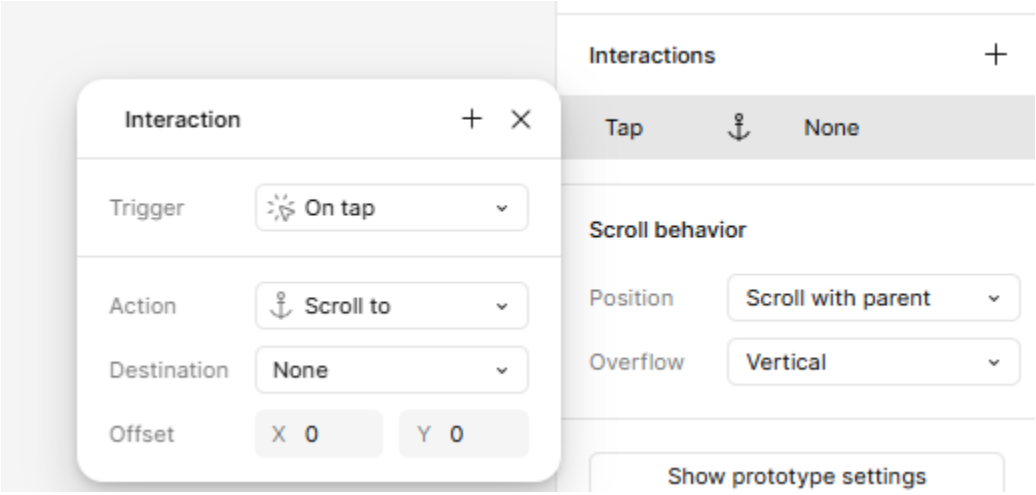


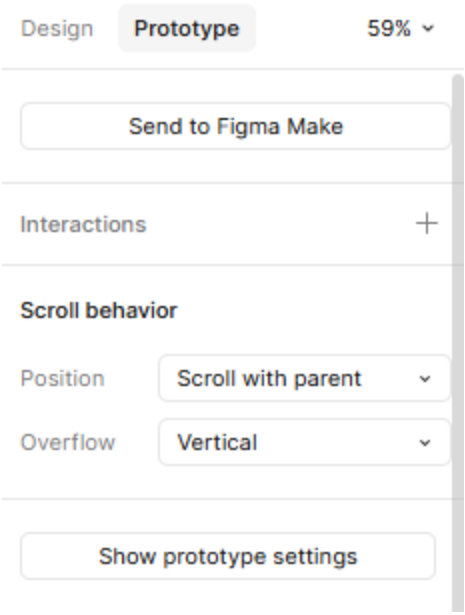
Then select the frames for which you want to give scrolling.

Go to Prototype>>Select Frame>> Overflow (Vertical/Horizontal)

Also can give interaction and on the clip content option

Don't give any scrolling option to android compact screen





Click on preview to check
